Philosophy Faculty Reading List and Course Outline 2018-2019

PART IB PAPER 05:
EARLY MODERN PHILOSOPHY

SYLLABUS

- Locke, Essay Concerning Human Understanding, Books I and II.

Some comparative questions may be set.

COURSE OUTLINE

In the wake of the scientific revolution of the seventeenth century the Early Modern period saw intensive work on knowledge and scepticism, and on the nature of thought and its ability to represent reality. As well as representing the world we also act in it, and the nature of agency, motivation, choice and the explanation of action is a further common theme discussed by philosophers in this period.

Offered for study are central texts by some of the most important Early Modern thinkers. They comprise Leibniz, often referred to as the ‘rationalist’, who stressed the power of reason as the basis for our knowledge of nature and its properties. They also include Locke, Berkeley and Hume, often referred to as the ‘empiricists’, who regarded knowledge as ultimately derived from experience and who consequently faced the problem of the limitation of knowledge.

The course provides an opportunity for students to develop a critical understanding of some of the most important ideas and arguments of these philosophers, and of the relation of their positions to one another.

Prerequisites

None

Objectives

Students taking this paper will be expected to:

1) Acquire a detailed knowledge of some of the arguments contained in the texts studied.
2) Acquire some sense of how the positions on different topics relate to each other.
3) Engage closely and critically with some of the ideas and arguments studied.
4) Develop their ability to think independently about the issues presented, through study of the set texts and, where appropriate, comparison of them with modern positions.
